

AVIATION E-LICENSING

Our e-Licensing software is a complete online solution for managing aviation licences, from application submission to licence production.

Designed in partnership with CAA International, Aspeq has developed a world-class leading electronic licensing system for the aviation sector.

Built on the latest Microsoft technology and with workflow functionality, aviation licensing has never been so efficient. Our system saves time and resources by fully automating all licensing processes – substantially reducing the administration costs of managing licence applications.

BENEFITS FOR AVIATION AUTHORITIES

- Complete management of the licensing process.
- Fully traceable digital licensing means no paper processing.
- Automated workflow processes to improve business efficiency and provide better customer service.
- Ability to develop and manage licensing workflows without software developers.
- Enhanced security and information tracking.
- Full oversight for compliance and quality assurance.
- Auditing capability ensures applications fully comply with regulatory requirements.
- Manage performance metrics and reporting with real-time tracking of applications.

BENEFITS FOR CANDIDATES

- Self-assess for licence eligibility.
- Submit all information online - no paper forms.
- Complete their application over time while they are training.
- Get information from training providers directly through the system.
